Bar Clamp Corner Squaring Fixture

First Inventor: Howard F. Gokey

(518) 483-5525

ABSTRACT

As prescribed by 37 CFR 1.72(b)

The Bar Clamp Corner Squaring Fixture can be used primarily for clamping and holding picture frames in a completely square position while the glue that is used to attach them together dries.

The clamps provide a unique method of using existing bar clamps to perform the function and do not require a lot of minute hand adjustments to move to different size frames. Use of the Bar Clamp Corner Squaring fixture also provides the ability to hold both small and large size frames with a larger holding surface than some existing methods.

In addition to the primary function, the Bar Clamp Corner Squaring Fixture is versatile enough to allow other objects to be squared up for gluing or nailing.
